

Statement of Verification

BREG EN EPD No.: 000388

Issue 02

This is to verify that the
Environmental Product Declaration
provided by:
GCP Applied Technologies

is in accordance with the requirements of:
EN 15804:2012+A1:2013

and

BRE Global Scheme Document SD207

This declaration is for:
1m² of Preprufe® 300R, Preprufe® 300R Plus, Preprufe® 160R and Preprufe® 160R Plus Waterproofing Membrane

Company Address

487/488 Ipswich Road

Construction Product

Product Description

Preprufe® waterproof membranes are composite sheets comprising a robust HPDE backing, a pressure sensitive adhesive and a trafficable weather resistant coating. Uniquely, the membrane develops a continuous adhesive bond to concrete poured against it. This prevents water migration between the structure and the membrane, substantially reducing the risk of leaks. Preprufe® is used as a moisture and gas barrier underneath structures. This EPD covers the products Preprufe® 300R, Preprufe® 300R Plus, Preprufe® 160R and Preprufe® 160R Plus waterproofing membranes and is calculated from a production weighted average of all products.

Technical Information

Property	160R/160R Plus Value, Unit	300R/300R Plus Value, Unit
Visible defects (EN1850-2)	None	None
Straightness (EN1848-2)	Pass	Pass
Length (EN1848-2)	35.15-36.65 m ± 0.25	30.15-31.15 m ± 0.25
Thickness (EN1849-2)	0.8-0.85 mm ± 0.06	1.2-1.23 mm ± 0.06
Width Carrier Sheet (EN1848-2)	1.206-1.18 m ± 0.01	1.206-1.18 m ± 0.01
Mass per unit area net of release paper (EN1849-2)	810 g/m ² ± 50	1150 g/m ² ± 50
Water tightness to liquid water (at 60 kPa) (EN1928)	Pass	Pass

Property	160R/160R Plus Value, Unit	300R/300R Plus Value, Unit
Resistance to impact (AI board) (EN12691)	≥ 250 mm	≥ 400 mm
Resistance to tearing (Nail Shank)- unreinforced sheets (EN12310-1)	≥ 300 N	≥ 450 N
Joint strength (EN12317-2)	≥ 480 N/50mm	≥ 850 N/50mm
Water vapour transmission (EN1931)	700-950 μ (= sD/d) ± 30%	700-950 μ (= sD/d) ± 30%
Durability of water tightness against ageing/degradation (at 60 kPa) (EN1296 / EN1928 Method B)	Pass	Pass
Durability of water tightness against chemicals (at 60 kPa) (EN 1847 Method B / EN 1928 Method B)	Pass	Pass
Durability of tensile properties against chemicals (EN13967 Annex C)	Pass	Pass
Compatibility with bitumen (EN1548)	Pass	Pass
Resistance to static loading (EN12730)	≥ 20 - Pass	≥ 20 - Pass
Tensile properties – unreinforced sheets (EN 12311-2 Method A)	Longitudinal ≥ 60 N/50mm Transversal ≥ 60 N/50mm	Longitudinal ≥ 110 N/50mm Transversal ≥ 120 N/50mm
Tensile properties – unreinforced sheets - elongation (%) (EN 12311-2 Method A)	Longitudinal ≥ 4.5% Transversal ≥ 4.0%	Longitudinal ≥ 4.5% Transversal ≥ 4.0%
Reaction to fire (Class; test conditions) (EN 13501-1)	E	E

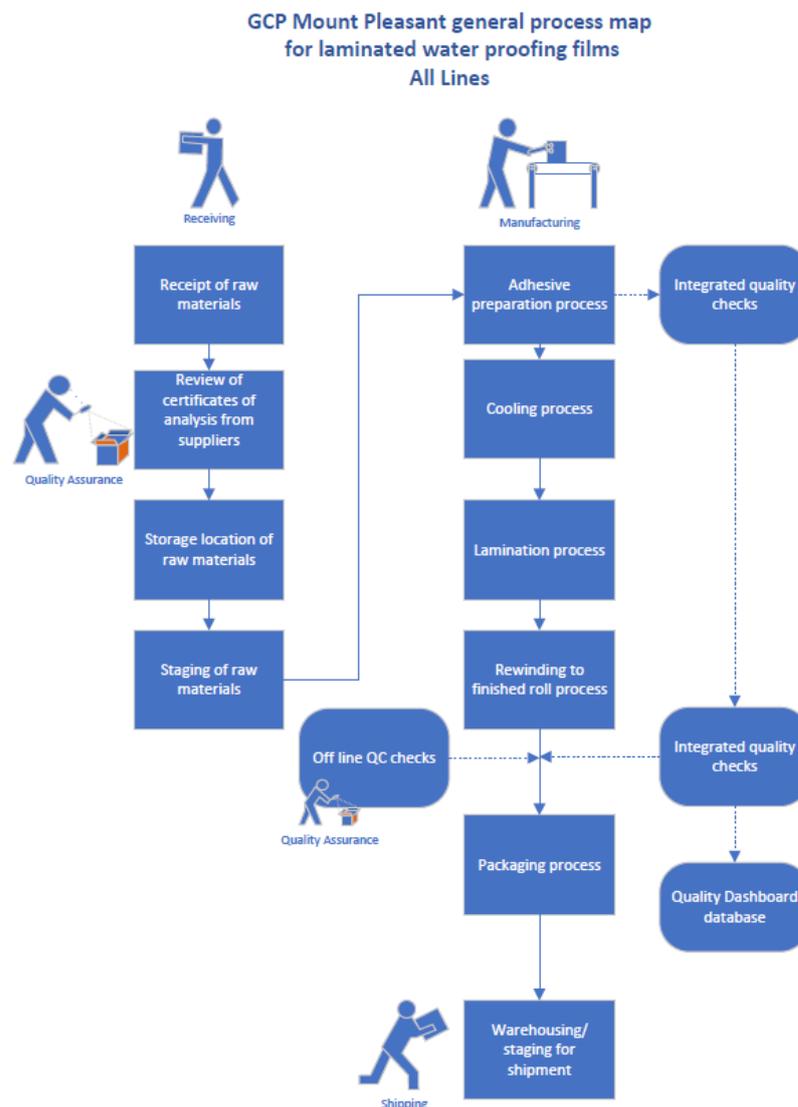

Main Product Contents

Preprufe® 300R, Preprufe® 300R Plus, Preprufe® 160R and Preprufe® 160R Plus Material/Chemical Input	Average %
High density polyethylene, HDPE	63.5
Proprietary polymers and additives	33.4
Lagcoat or Lagcoat Plus release liner	3.1
Total	100

Manufacturing Process

Heated adhesive is coated onto a film. A release liner/protective coating is applied and the product is cut to length, rolled and boxed for shipment.

Process flow diagram

Construction Installation

Preprufe® is a pre-applied 1.2 m wide membrane on rolls for adhesive bond to freshly poured concrete, installed without heat or open flame, prior to the installation and fixing of steel reinforcement and the concrete pour. The overlaps of the membrane sheets are bonded by means of the prefabricated self-adhesive edges on the membrane sheets. Roll ends and details are bonded and sealed with Preprufe accessory tape. Due to the overlaps of the membrane sheets the average consumption of membrane per 1m² is approx. plus 7.5%. Installation work shall be carried out only by GCP trained applicators/contractors. For further details refer to data sheets on <https://gcpat.com/en/solutions/products/preprufe-membrane-pre-applied-waterproofing-solutions>.

Use Information

If the Preprufe® system is properly and correctly installed as per GCP instructions, no maintenance, repair or replacement is required during the service life of the structure. The highly durable, robust and extremely reliable feature of the Preprufe® system will limit any repair work to a minimum, if membrane damage occurs the fully bonded membrane will prevent any water migration and between membrane and the concrete structure in the event of puncturing or damaging the membrane. Thus no scenario for repair work is defined.

End of Life

When a building is demolished at the end of its service life, the Preprufe® system bonded to the concrete cannot be separated and remains part of the construction rubble. This is in general taken to landfill. Preprufe® is only a minor part of the whole volume during demolition of the concrete structure. Therefore no other steps are considered as necessary with the exception for transportation to a landfill.

If the client and wrecking contractor are required according to local regulations to separate the demolished concrete from steel reinforcement and other embedded items, the Preprufe® will remain bonded to the concrete, which can be grinded to smaller concrete particles and used as backfilling material or substrate in other construction work.

Life Cycle Assessment Calculation Rules

Declared unit description

1m² (1.39 kg/m² maximum manufactured weight) of Preprufe® 300R, Preprufe® 300R Plus, Preprufe® 160R and Preprufe® 160R Plus waterproofing membrane installed over a 60 year period.

System boundary

This is a cradle to gate with options LCA of GCP's Preprufe® 300R, Preprufe® 300R Plus, Preprufe® 160R and Preprufe® 160R Plus waterproofing membrane products, manufactured by GCP in the United States. It follows the modular design defined in EN15804:2012+A1:2013. Cradle to gate modules, A1 to A3 and optional modules A4 to C4, are reported but not module D.

Data sources, quality and allocation

Manufacturer-specific data from GCP covering a production period from 1st January to 30th April 2021 has been used for this EPD. Figures for input materials and packaging were uplifted to account for production waste.

GCP manufacture other products at the Mt. Pleasant site. Allocation by mass has been used to calculate the input energy flows (electricity and natural gas), emissions to air and water and waste flows per selected products according to the provisions of the BRE PCR PN514 and EN 15804. Product formulations including

packaging data were combined with allocated manufacturing data to calculate the cradle to gate LCA profiles for the Preprufe® products. Preprufe® products form 18.1% of total production at the site.

Since the Preprufe® 300R and 300R Plus products have the same weight per square metre, a production weighted average has been calculated for all entries. The 300R and 300R Plus products are also heavier per m² than the 160R and 160R Plus products and so the 300R and 300R Plus products were chosen to represent all products as a 'worst case scenario'. Figures for input materials and packaging were uplifted to account for production waste. The difference in weight between manufactured and installed weights is due to the release paper being removed during installation.

All data for modules A4 to C4 has been supplied by GCP. The waste created at installation is assumed to go to landfill. The scenario of transport to a landfill site in South London from an installation in the centre of London has been assumed. Preprufe® LT tape is used for the installation of the membrane. This is transported from the USA plant along with the membrane.

Secondary data have been drawn from the BRE LINA database v2.0.82 and the background LCI datasets are based on ecoinvent v3.2 (2015).

Quality Level	Geographical representativeness	Technical representativeness	Time representativeness
Very Good	Data from area under study	Data from processes and products under study. Same state of technology applied as defined in goal and scope (i.e. identical technology)	n/a
Fair	n/a	n/a	Less than 10 years of difference between the reference year according to the documentation, and the time period for which data are representative

The quality level of geographical and technical representativeness is Very Good. The quality level of time representativeness is Fair as the background LCI datasets are based on ecoinvent v3.2 which was compiled in 2015 and so there is less than 10 years between the reference year according to the documentation, and the time period for which data are representative.

Cut-off criteria

No inputs or outputs have been excluded. All raw materials and packaging inputs, plus their transport, process and general energy and water use, production and non-production waste, and direct emissions to air have been included. Direct emissions to water and soil have not been included as these are not measured.

MFR = Materials for recycling

MER = Materials for energy recovery;
EE = Exported Energy

Scenarios and additional technical information

Scenarios and additional technical information				
Scenario	Parameter	Units	Results	
A4 – Transport to the building site	Distances from US plant to UK distribution including Preprufe® LT tape used for installation.			
	Diesel/ 16-32 t lorry	Kg/vkm	0.3	
	Distance:	km	1012.3	
	Lorry capacity utilisation (incl. empty returns)	%	24	
	Ship distance by sea	km	6614.4	
	Ship capacity utilisation (incl. empty returns)	%	65	
	Weight of transported products	Kg per roll	50	
A5 – Installation in the building	Preprufe® is a pre-applied 1.2 m wide membrane on rolls to achieve adhesive bonds to freshly poured concrete, installed without heat or open flame, prior to the installation and fixing of steel reinforcement and the concrete pour. The overlaps of the membrane sheets are bonded by means of the prefabricated self-adhesive edges on the membrane sheets. Roll ends and details are bonded and sealed with Preprufe® LT accessory tape.			
	Preprufe® LT tape	kg	0.26	
	Preprufe® waterproofing membrane waste at installation (2.5%)	kg	0.034	
	Transport of installation waste to landfill: Diesel/ 16-32 t lorry	kg/vkm	0.3	
	Distance	km	7	
B1 - Use B2 – Maintenance B3 – Repair B4 – Replacement B5 – Refurbishment	Preprufe® is a fully bonded waterproofing membrane for below ground waterproofing of building structures. Uniquely, the membrane develops a continuous adhesive bond to concrete poured against it. If the Preprufe® system is properly and correctly installed as per GCP instructions, no maintenance, repair or replacement is required during the service life of the structure. The highly durable, robust and extremely reliable feature of the Preprufe® system will limit any repair work to a minimum, if membrane damage occurs. The fully bonded membrane will prevent any water migration and between membrane and the concrete structure in the event of puncturing or damaging the membrane. Thus no scenario for repair work is defined.			
	Reference service life	According to the BBA Agreement Certificate 97/3325 the service life for the Preprufe® system is stated for the lifetime of the structure. PrePrufe® is based on a highly durable HDPE carrier film with life time expectations > 100 years in service. Therefore, at least a 60 year building service life can be assumed.		
	C1 to C4 End of life,	When a building is demolished at the end of its service life, the Preprufe® membrane system bonded to the concrete cannot be separated and remains part of the construction rubble. This is in general taken to landfill. Preprufe® membrane is only a minor part of the whole volume during demolition of the concrete structure. Therefore no other steps are considered as necessary with the exception for a transportation to a landfill. Distance assumed is to a middle-sized landfill in South London and from the location of installations in the centre of London.		
		Diesel/ 16-32 t lorry	kg/vkm	0.3

Scenarios and additional technical information

Scenario	Parameter	Units	Results
	Distance	km	7
	Capacity utilisation (incl. empty returns)	%	24
	Weight of transported products to landfill	kg/unit	1.39

Interpretation

Analysis of the results shows that the following raw materials have the highest and second highest impacts for the selected indicators:

Indicator	Highest impact	2nd highest impact
GWP	HDPE (68.3%)	Block copolymer (11.3%)
ODP	KELC resin (30.5%)	HDPE (20.3%)
AP	HDPE (52.0%)	KELC resin (19.6%)
EP	KELC resin (58.9%)	HDPE (17.6%)
POCP	HDPE (61.6%)	KELC resin (19.9%)
ADPE	Block copolymer (63.0%)	KELC resin (15.5%)
ADPF	HDPE (65.9%)	KELC resin (11.5%)
